Concepts

Numbers to the nearest 10:

When rounding to the nearest ten the key figure is the units digit. If the units are 5 or above, round up. If the units are below 5, round down.

Eg 67 is 70 to the nearest 10 54 is 50 to the nearest 10

(Note that although 65 is half way between 60 and 70, it is usual to round up to 70)

Numbers to the nearest 100

When rounding to the nearest 100 the key figure is the tens digit. If the tens digit is 5 or above, round up. If it is below 5 round down.

Eg 275 is 300 to the nearest 100 245 is 200 to the nearest 100

(Note that it does not matter what the units digit is, it is the TENS digit that must be looked at.)

Numbers to the nearest 1 000

When rounding to the nearest 1 000 the key figure is the hundreds digit. If the hundreds digit is 5 or above, round up. If it is below 5, round down.

**Eg 2 750 is 3 000 to the nearest 1 000.
2 199 is 2 000 to the nearest 1 000**

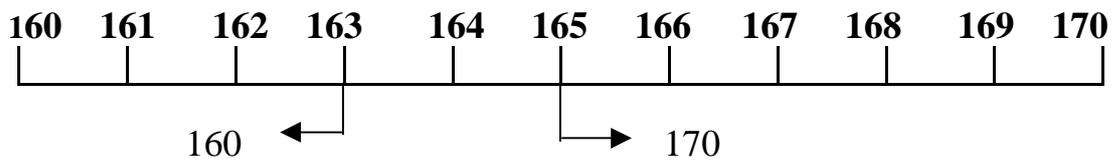

(Note that it does not matter what the tens or units digits are, it is the HUNDREDS digit which must be looked at.)

Be careful that when rounding, children do not write:

$$2\ 345 = 2\ 000$$

because 2 345 does not equal 2 000.

2 345 = 2 000 'to the nearest 1 000' should always be added or it can be written: 2 345 → 2 000
